

Orchid care made simple.
Use these tips to keep your
plant healthy and encourage
consistent reblooming.

The Basics

DRENCH

the roots in water and soak for 5 minutes.

DRAIN

for another 5 minutes or until dripping stops.

DISCARD

excess water before returning to the decorative
container.

Pro Tip

Healthy roots appear green-gray. Brown or dried roots
may indicate dehydration.

Light & Temperature

Place orchids in bright indirect light, away from direct sun.

Ideal temperature: 65-75°F (18-23°C).

Air Flow

Keep orchids away from direct drafts, such as air conditioning, which can dry plants and accelerate wilting.

Orchid Health Check

Look for these signs:

- Yellow or red leaves
- Wrinkled or spongy leaves
- Thinning leaves
- Flowers wilting quickly
- Mushy, yellow, or brown roots
